

Test Suite Canvas Worksheet

Test Suite Name:				
Why What business question am I trying to answer with this suite? What risk does this mitigate?	Dependencies What systems or tools must be functional for this suite to run successfully?	Constraints What has prevented us from doing this before? What are our known workarounds?	Pipeline/Execution Is the suite part of a pipeline? When is it triggered? How often does it run?	Data Do we mock? query? inject? How is the data setup and managed?
Contributions and Failure Response Who creates the tests? Who contributes? Who is not involved but should be? If a test fails, who addresses that, and how?		Maintainability What is the code review process? What documentation exists? Is it clear how to contribute? How do we maintain the framework?		Effectiveness How do we know the suite is effective? What is it finding? What is it preventing?
